Whenever receiving goods, landed costs will be incurred. This is an inescapable reality of running a business.

However, using Onport, you can easily view and manage your landed costs by seeing them as payment reports or individual invoices. They also might be applied to any dropship purchases where you need to add or subtract handling fees. For example, you could add a \$5 fixed amount to each vendor payout.

This can help you to stay on top of your costs and prevent potential friction occurring between you and those in your supply chain, allowing you to continue to focus on bringing value to your end customers.
